The Problem & Solution

1

The Problem

As the world continues to take more and more pictures, use more and more data, and expand their storage into the cloud and other sources, users are facing difficulties finding their photos quickly and efficiently.

The Solution

Empower people and groups to have more control over their visual media and transform the way they manage it, saving everyone time and effort

My Story

3

The evolution of a phone's ability to capture and store images fascinated me, yet I found that there was something critical missing in the way pictures were managed.

Often, I would scroll through my gallery endlessly, working unnecessarily hard to find important screenshots of documents or images. If I was lucky enough to find what I was searching for, I would create a duplicate of the image so that it would appear first in my gallery. Other times I would give up on my search or would simply take a second screenshot of the document.

Overtime I developed a sharp pain on my right thumb. Little did I know this would eventually become the ultimate motivation behind Photohub's inception; I just knew there had to be a better way.
